Name:

# Excel Formula Worksheet

Please create the required formulas necessary to accomplish the desired result. Use the following as a guide:

| | |
|---|---|
| * | =multiplication |
| / | = division |
| + | = addition |
| - | = subtraction |
| () | = anything in Parenthesis is done first |
| $ | = forces the cells to be constant regardless of where you copy it (ex. $B$3) |

*Reminder: Always start your formula with an equal sign (=).*

## Example:

| | |
|---|---|
| Divide cell B1 by cell C3: | =B 1/C3 |
| Multiply 200 by cell F5: | =F5*200 |
| Divide cell E4 by cell G7 and then add 200: | =(E4/G7)+200 |
| Subtract cell G6 from cell A3: | =A3-G6 |

## Exercise:

1. Add cell A1 and cell B5:

2. Multiply cell G2 by 500:

3. Subtract cell R4 from cell G6:

4. Divide cell A1 by cell A7:

5. Add 200 and cell B6 and then multiply by cell G7:

6. Add cell T6 to cell F9:

7. Multiply cell F16 by cell H4:

8. Subtract cell E20 from cell E22:

9. Multiply cell T5 by cell R3 and then divide by cell W3:

10. Add cells F5, R2 and C7:

11. Subtract cells G1 and G2 from cell Cl:

12. Add cell M3 to M4 and subtract M5:

13. Divide cell B1 by B7 and then add cells B3, B4 and B5:
