Computer Security

Directions:

Directions:
1. Read the content below.
    There are numerous threats to computer and network security. Computer viruses or cyberattacks can render a user's personal information vulnerable. Individuals who initiate cyberattacks or attempt to steal private data or information are often referred to as hackers. Hackers with ill intent can cause a great amount of harm from computer malfunctions to identity theft. Ensuring proper security on one's computer or digital devices can help protect against various threats.

2. In a group of three or four, discuss the security risks computer users are likely to encounter on a computer (e.g., identity theft, hackers, etc).

3. Provide the solutions to protect your personal computer from any possible computer security risks.

4. As a group, present the solutions to the class.
